But something's changed. As the price of housing in the city has reached all-time highs, large swaths of middle-class housing in suburbs have suddenly become desirable and expensive, sometimes beyond the reach of many new residents. It's one of the key reasons why the U.S. population of large metropolitan areas is expected to increase by another 3.5 million people by 2030, according to a new report by the U.S. Census Bureau. That's up from a population of 12.3 million in 2000, and it could make the suburbs of Washington, D.C., and other cities like Dallas and Denver, so much more attractive than they have been in the past. This is especially true for millennials, the nation's largest generation, who are moving away from metropolitan areas in droves in search of affordable housing and more suburban-style family life, according to a study released by the National Association of Realtors earlier this year. Among millennials, however, the largest number of younger households are choosing to live in the suburbs, according to the report. The group's preference for the suburbs over the city isn't an anomaly: They're following the example of the baby boomers, a similar demographic group that also moved away from the cities in droves. And for good reason. "There's an ever-increasing number of people who are finding that the price of housing in the city is prohibitive," says Charles Babcock, a senior economist at the NAR. "In order to have a family life that is able to succeed, you need to be able to be affordable." The suburbs, however, are becoming much more affordable for many millennials. Babcock says the suburbs are also offering more amenities that are attractive to young people. "There are still some good city neighborhoods," he says a1d647c40b

People who refuse a final salary payout to NHS staff could be jailed, according to plans published by the Department of Health on Thursday. The department is currently consulting on proposals that would let NHS pension schemes and their trustees "enforce" a new pensioner's rights - which have been under review since April 2016 - in "serious cases of breach of those rights". The consultation paper has been published to allow public comment on the proposals and also aims to "refine" them. But critics have warned that the government's approach could lead to people being prosecuted for "undue hardship", which is currently not a criminal offence. The government's plans would force NHS providers to consider applying to the courts where patients had the right to a final salary scheme pension. The current unfair dismissal code, introduced in 2016, requires employers to pay severance benefits after a "lengthy period of employment". But under the plans, if an NHS staff member is entitled to the final salary scheme, and the provider fails to pay them in accordance with their contract, then they could be prosecuted for "unjustified refusal of a lawful claim". Possible sanctions could include a fine or prison sentence of up to five years. The proposals also include plans for the introduction of the Forced Labour Act 2018 to make it illegal to require someone to work in a way that "causes" them undue hardship. In a statement, the Department of Health said: "The Forced Labour Act aims to ensure that vulnerable people cannot be forced to work in conditions that harm them, and it must be enforced by prosecutors." A spokeswoman said the new measures will "strengthen the current protections" for workers, adding: "This will make the law clearer to people, who will know what their rights are." The plans are part of a package of reforms being brought in by the government
