I tried this. After I don't know why this doesn't work. System.Type type = a.GetType(); dynamic typeInt = typeof(int); string method = a.GetType().GetMethod("set_B").Name; dynamic a = method; (dynamic a) is a var so it is possible to call a method/variable of type dynamic. So, now it is working, but I don't know what a is now. dynamic type = a; How is it possible to tell the type of this variable? I need to get the value of 'B'. string b = a.B; // won't compile due to "Object does not contain a definition for B" string b = dynamic.B; // doesnt compile because it does not exists? string b = type.B; // doesnt compile because it is a int? Thank you! EDIT: When I try to set the value of B I would like to check if it is a int or string type. I know, I could do some casting, but I try to avoid to do this when I can avoid it. a.B = 1; // if B is an int a.B = "someText"; // if B is a string A: If your property contains only value types: dynamic a = method.Invoke(a, new object[] { b }); If your property contains both value and reference types: dynamic a = method.Inv
